

PRESS RELEASE

**Hyosung launches
regen™ recycled nylon and polyester at ispo**

Brand New Village Hall A3 January 27- 30 2008

As one of the world's largest producer of nylon-6 fiber and polyester, **Hyosung's** Nylon and Polyester Performance Units have had a long history of environmental stewardship by recycling both lower grade and waste nylon and polyester produced during the manufacturing process.

Hyosung's Nylon Performance Unit is now utilizing post industrial and consumer waste including nylon fishing nets, BFC carpets and nylon fabrics to produce a range of **MIPAN® regen™** nylon fibers. The recycled nylon chip is made from recaptured caprolactam. **MIPAN® regen™** is then extruded and made into textiles to deliver the same first quality and performance as **Hyosung's** virgin nylon yarns.

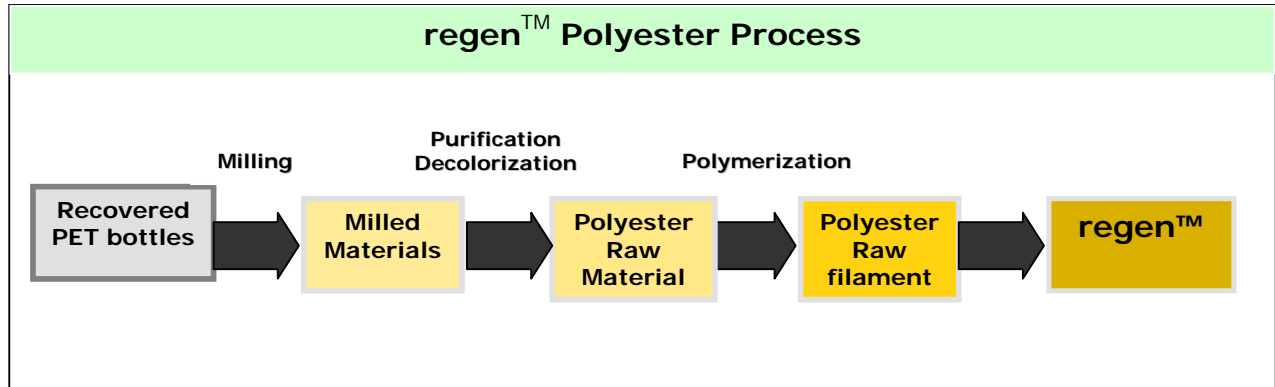

Hyosung recognizes that the need for environmental stewardship is growing in importance as consumers become more concerned about sustainability and damage to the environment.

MIPAN® regen™ delivers:

- Reduced energy consumption
- Reduced waste to landfill
- Conservation of petroleum resources
- Fabric processing & quality consistent with traditional virgin nylon

Hyosung's Polyester Performance Unit takes a similar environmentally conscious path and recycles waste polyester from the early stages of the manufacturing process.

Hyosung is now using PET bottles and other post consumer waste to produce **regen™ Polyester** and offers these key benefits:

- Reduced energy consumption
- Made from 100% recycled materials
- Conservation of petroleum resources
- Identical quality to regular polyester yarn made from petroleum

MIPAN® regen™ and **regen™ Polyester** will show on the **creora®** stand Brand New ispo Hall A3 Brand New Village.

January 2008.
